Hyper-decoration

Papers wall tiling collection was created in response to a quest for environments that inspire tranquillity as a synonym for quality of life, defining dreamy, luminous interiors endowed with timeless beauty.

Papers tells a story of rebirth and rediscovery of people's identity through the organisation of colours and decorative patterns according to an "organised disorder" that tells of their personality and zest for life through a large 60x180 size, a semi-matt, soft surface and a textural structure that can live in total white with the matching plain tile or serve as a base for the numerous decorative proposals.

The four colours that make up the colour palette - Bianco, Beige, Verde and Blu - go well with the rich decorative mood that ranges from 3D structures to geometric or floral-inspired decorations that can also be used on the entire wall in the shower.

Papers

the right balance between white and color

- The Shanghai Structure is characterised by horizontal and linear elements on a semi-matt surface;
- Branch decoration reinterprets the flowery theme in a minimalist manner with a purely vertical graphic development suggested by the chasing branches, whose flowers in shades of beige and white alternate with the blue of the leaves, reflecting the colours of the collection;
- Bloom decoration is a macro-tropical pattern with a strong visual impact. It looks best on large walls where its effect is amplified;
- Optical decoration is exquisitely geometric, echoing a 70s pattern that is brought up to date by the colour palette;
- Sun decoration is another lively interpretation of the flowery theme. The colours are soft and elegant, the strokes reminiscent of the light, semi-transparent brush strokes typical of watercolours. All the decorations are "touch", i.e. made with the random application of grits that highlight certain areas of the surface, giving depth and emphasising the interplay between glossy and matt.
